## Incisive Insights Newsletter – June Issue

You may have heard of the infamous spreadsheet risk. However, it can be difficult to mitigate without knowing what it means or how it can affect your business. Despite being present in all financial organizations, many companies fail to take spreadsheet risk seriously, opening themselves up to costly errors that can lead to severe consequences.

Best-in-class firms that understand and prioritize mitigating spreadsheet risk are better positioned to protect customers, revenue, and reputation. Fortunately, modern technology solutions, including our spreadsheet management software, are available to support businesses as they start to prioritize spreadsheet risk management.

Read our spreadsheet risk primer to begin your path to becoming best-in-class.

Many firms deal with countless currencies in today's global economy, but improperly categorizing them in spreadsheets (mistaking Canadian or Singapore dollars for American ones, for example) is a human error that can easily happen. Unfortunately, it can also be very costly and pose real implications for a company's employees and customers, as well as its shareholders. Enterprises must be able to mitigate this spreadsheet risk in order to protect their revenue and reputation.
