## Incisive Insights Newsletter – August Issue

Many businesses are using spreadsheets and other EUCs for multiple use cases due to their flexibility and transparency, but it is key that businesses can appropriately evaluate risk appetite within these tools. There are key differences between the management of model risk and spreadsheet risk which need to be understood to ensure that the scope of spreadsheets can be fully appreciated while dealing with a lack of accountability and regulation for this risk type. Standardizing approaches within spreadsheet management, such as within controls and validation, will increase efficiencies and reduce the level of risks an institution is exposed to while providing opportunities for competitive advantage.

Watch our on-demand webinar, “Successful Strategies for managing spreadsheet within your institution” featuring our panel of experts from MUFG Union Bank and KPMG, as they discuss new ways to address risk management and standardize approaches to ensure conceptual soundness and overcome issues surrounding the large volume of spreadsheets and other EUCs.
