

Gain a deeper trust in your data

[Learn How](#)

## Incisive Insights Newsletter – July Issue

Dear Reader,

For all the promises data architects have broken, Microsoft Excel has been there to track, compile, sum, slice and chart your business through challenges and successes, and everything in between. But Excel is not perfect.

Spreadsheet-enabled processes are almost entirely manually driven, and the burden is on the user for accuracy and consistency. These manual processes expose the firm to risk from errors occurring in formulas, data connectivity, formatting and version control.

Excel will continue to be a critical tool for businesses of all sizes, but we do not have to accept the risks associated with using it. Fortunately, modern technology solutions are available to support these businesses as they start to prioritize spreadsheet risk management.

Join us for a recorded thought leadership discussion, *“Think Spreadsheet Risk Isn’t a Threat? Think Again.”*, to learn why companies that prioritize mitigating spreadsheet risk are better positioned to protect customers, revenue and reputation.
